

ABSTRACT

A two piece wireless phone is disclosed. Preferably, the wireless phone is comprised of two modules. The first module preferably comprises the functional components of a wireless phone. The second module comprises the user interface components, and enables a user to operate the wireless phone. In one embodiment, the first module is reusable while the second module is interchangeable. The first module includes a connection area that is engageable with a connection area included in the second module. Because the functional components of the wireless phone are not included in the second module, the cost of replacing the second module is minimized.
